

GENERAC[®]

**INDUSTRIAL
POWER**

Application:
Municipal

Location:
**Indianapolis, IN
US**

Model(s):
**2 x MD 350 Diesel
1 x SD 275 Diesel**

System Configuration:
480V, 975kW

Indianapolis Colts Training & Office

Application Background: "The Indianapolis Colts were looking to install backup generators at the Indiana Farm Bureau Football Center, home of the Colts' practice facility and team office complex. During critical periods of the season like the NFL playoffs and NFL draft, the Colts required smooth, uninterrupted operation of the facility. Previously, they were using rental generators during these critical times. However, with the consistency of their playoff appearances, the need for these rental generators became a frequent occurrence. They decided to pursue a more permanent, reliable, and flexible solution."

Solution: "EVAPAR, a Generac Industrial Power Distributor, worked with the Colts to implement a 1 x 275kW generator for the training facility and a 2 x 350kW solution for the office complex utilizing Generac MPS paralleling technology. Compact size and simple installation were key drivers in the decision making process. These gensets provided assurance of operation during outages, eliminating any concern over lost practice time during the NFL playoffs. These generators were also put to the test during a winter outage with below freezing temperatures. The generators provided power to the facility with few staff members even realizing the utility power was lost."
